M3 · Intro2SE 15031001 · Semester 1/2569

BaanRight

Thai housing listings, translated into decisions — rent, deposit, phone, location and distance from MFU, in one click.

Team 16RideRight · Group 16 · demo 16 Nov

THE PROBLEM

MFU students who don't read Thai can't read the rental market

- Listings live in Thai Facebook groups: rent, deposit and phone number buried in free text.
- Translating by hand costs minutes per post — the good rooms are taken first.
- The details that decide a visit are the ones machine translation mangles: deposit months, soi names, distance to campus.

A typical post

ห้องให้เช่า ซอยแม่จันใต้ 3
ค่าเช่า 6000 บาท/เดือน
ประกัน 1 เดือน
ห่างจากมหาวิทยาลัย 10 นาที
สนใจโทร 081-234-5678

What a student needs

฿6,000 / month · 1 month deposit · 10 min from MFU · 081-234-5678

WHO IT'S FOR

Three moments, one product

1 · Find

Paste a post → read rent, deposit, phone, soi and distance in English → call the landlord.

2 · Compare

Save listings → search and shortlist with ★ → export CSV and compare side by side.

3 · Reply

Tick the questions that matter → get a Thai message ready to paste into Messenger.

Same workflow in the Chrome extension (inside Facebook) and in the web prototype (any device).

LIVE DEMO

What we'll show in 4 minutes

1. **Load demo post → Translate.** Price hero, details grid, distance row.
2. **Save the listing,** reload the page — it's still there.
3. **Search + shortlist,** then export the CSV.
4. **Ask the landlord:** tick three questions → Thai message → copy.
5. **Extension in the wild:** right-click a Thai Facebook post → *Translate with BaanRight*.

WHAT'S BUILT

Features, both surfaces

Translate & extract

Chunked th→en translation plus price, deposit, phone, location and availability.

Distance to MFU

Stated minutes, map links, or the Fah Thai market landmark — never a blank cell.

Saved + shortlist

Searchable list, ★ filter, one-tap call, original post link, photo thumbnails.

Photos

Add, paste or drag photos into the tray; they save with the listing and download later.

Ask the landlord

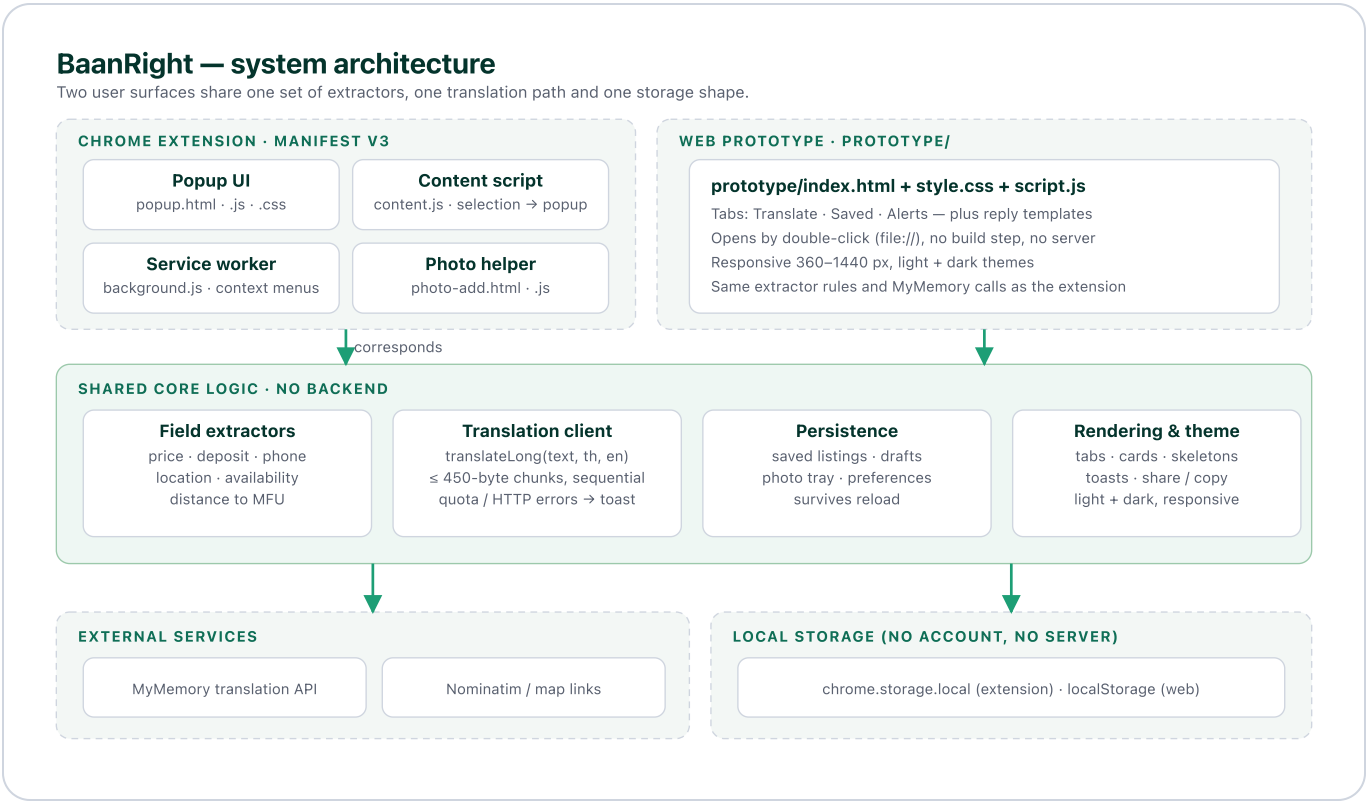

Five common questions translated into Thai and copied in one tap.

Export & alerts

CSV export for comparing, area + budget alerts, light/dark theme, autosaved drafts.

UNDER THE HOOD

One core, two surfaces, no backend

Extractors, translation client and storage shape are shared — the web prototype behaves exactly like the extension.

GOLDEN THREAD

Every Must FR is traceable

FR	REQUIREMENT	PROTOTYPE	EVIDENCE
FR-1	Input a housing listing	Translate tab	Paste, demo post, source link
FR-2	Translate into English	Translate tab	Demo posts; 4 chunking tests
FR-3	Extract + save key details	Details grid, Saved	11 extractor tests; save → reload
FR-4	Thai landlord reply	Ask the landlord	en→th output copied
FR-5	Translate selected page text	Right-click menu	Real Facebook post

Full table with design diagrams: **docs/final-report.md** · requirements: **docs/M2-srs.pdf**

QUALITY

Tested where it matters

Automated

- **11/11** unit tests pass — node --test tests/extractors.test
- Deposit formats, Thai digits, floor-area vs. location, trailing phone numbers
- Translation errors: quota text, HTTP 429, other statuses

Manual

- Real Facebook posts in the extension
- Responsive check at 360 / 768 / 1440 px
- Dark-theme contrast on key text pairs
- Full demo dry-run before class

HONEST LIMITS

What isn't there yet

- **Screenshot OCR** — not implemented; the UI says so instead of failing silently.
- **Translation** — free MyMemory tier with a fair-use quota; no offline mode.
- **Distance** — the landlord's figure, a map link, or a landmark estimate, not a routed walk.
- **Storage** — browser only, no account, no sync between devices.

NEXT

From prototype to product

- OCR so a screenshot is enough.
- Real routing distance from MFU.
- Optional account + sync for saved listings.
- Thai-language UI for landlords.

Thank you — questions?
